

TEST PLAN

(product name: amazon frontend)

Overview

This document serves as a high-level test planning document with details on the scope of the project, test strategy, test schedule, and resource requirements, test deliverables and schedule.

Scope

The scope of the project includes testing the following features of the 'https://www.amazon.com/' web application.

Inclusions

- Register
- Login & Logout
- Forgot Password
- Search
- Product Compare
- Product Display Page
- Add to Cart
- Shopping Cart
- Currencies
- Home Page
- Checkout Page
- My Account Page
- Order History Page
- Contact Us Page
- Menu Options
- Category Pages

From our understanding, we believe the above functional areas need to be Tested.

Test Environments

- Windows 10 – Chrome, Firefox, and Edge
- Mac OS – Safari Browser
- Android Mobile OS – Chrome
- iPhone Mobile OS - Safari

Exclusions

- All the features except that are mentioned under 'Inclusions'
- Any third-party features or Payment gateways
- Test Automation

Test Strategy

'Vivi' has communicated with 'Amazon' and has understood that we need to perform Functional Testing of all the functionalities mentioned in the above Scope section.

As part of Functional Testing, we will follow the below approach for Testing:

1. Creation of Test Scenarios and Test Cases for the different features in scope.

- We will apply several Test Designing techniques while creating Test Cases
 - Equivalence Class Partition
 - Boundary Value Analysis
 - Decision Table Testing
 - State Transition Testing
 - Use Case Testing
- We also use our expertise in creating Test Cases by applying the below:
 - Error Guessing
 - Exploratory Testing
- We prioritize the Test Cases

2. Our Testing process, when we get an Application for Testing.

- Firstly, we will perform Smoke Testing to check whether the different and important functionalities of the application are working.
- We reject the build, if the Smoke Testing fails and will wait for the stable build before performing in depth testing of the application functionalities.
- Once we receive a stable build, which passes Smoke Testing, we perform in depth testing using the Test Cases created.
- Multiple Test Resources will be testing the same Application on Multiple Supported Environments simultaneously.
- We then report the bugs in the bug tracking tool and send dev. management of the defect found on that day in a status end of the day email.
- As part of the Testing, we will perform the below types of Testing:
 - Smoke Testing and Sanity Testing
 - Regression Testing and Retesting
 - Usability Testing, Functionality & UI Testing

- We repeat Test Cycles until we get the quality product.

3. We will follow the below best practices to make our Testing better:

- **Context Driven Testing** – We will be performing Testing as per the context of the given application.
- **Shift Left Testing** – We will start testing from the beginning stages of the development itself, instead of waiting for the stable build.
- **Exploratory Testing** – Using our expertise we will perform Exploratory Testing, apart from the normal execution of the Test cases.
- **End to End Flow Testing** – We will test the end-to-end scenario which involve multiple functionalities to simulate the end-user flows.

Defect Reporting Procedure

During the test execution –

- Any deviation from expected behaviour by the application will be noted. If it can't be reported as a defect, it'd be reported as an observation/issue or posed as a question.
- Any usability issues will also be reported.
- After the discovery of a defect, it will be retested to verify the reproducibility of the defect. Screenshots with steps to reproduce are documented.
- Every day, at the end of the test execution, defects encountered will be sent along with the observations.

Note:

- Defects will be documented in excel.
- Test scenarios and Test cases will be documented in an excel document.

Roles/Responsibilities

Test Schedule

Following is the test schedule planned for the project –

Task	Time Duration
Creating Test Plan	Start Date to End Date
Test Case Creation	
Test Case Execution	
Summary Reports Submission	

Test Deliverables

The following are to be delivered to the client:

Deliverables	Description	Target Completion Date
Test Plan	Details on the scope of the Project, test strategy, test schedule, resource requirements, test deliverables, and schedule	Date
Functional Test Cases	test cases created for the scope defined	
Defect Reports	Detailed description of the defects identified along with screenshots and steps to reproduce on a daily basis.	
Summary Reports	Summary Reports – Bugs by Bug#, Bugs by Functional Area, and Bugs by Priority	

Suspension and Resumption Criteria

Based on the Client decision, we will suspend and resume the Project.
We will ramp up and ramp down the resources as per Client needs.

Tools

Risks and Mitigations

Approvals

Team will send different types of documents for Client Approval like below:

- Test Plan
- Test Scenarios
- Test Cases
- Reports

Testing will only continue to the next steps once these approvals are done.
